## What is the Endowment?

The Ohio State University requires substantial, consistent and permanent funding and, by receiving such funds, the university can continue to provide strong academic programs and innovative technology. Endowment Funds embody such a need.

An important objective that guides the investment of the University Endowment Fund is to preserve and maintain the real purchasing power of the fund's principal.

Gifts are invested in perpetuity, and distribution from the invested contributions is used to fund important programs and activities. A portion of the distribution may be reinvested in the fund at the request of the donor or department to further enhance the fund's buying power over time. All endowed fund gifts at Ohio State are pooled together with other long-term university assets to form the Long-Term Investment Pool. Within this pool are well diversified U.S. and International investments that include:

- Equities
- Fixed Income
- Real Estate/Natural Resources
- Private Equity
- Absolute Return/Hedge Funds

## Who Manages the Endowment?

The Office of Investments, under the guidance of the Investment Advisory Group of the Board of Trustees, is responsible for managing the Endowment. The university strives to earn the highest possible return from interest, dividends, realized gains and market value increases while maintaining an appropriate level of risk. To do this, the services of external investment managers are utilized. Both the Office of Investments and the Investment Advisory Group of the Board of Trustees closely monitor the performance of the endowment portfolio with re-allocation occurring as needed.

## How is a Fund Established?

New named funds are established by the Board of Trustees upon receipt of a gift of \$25,000 or more for an unrestricted endowed fund and \$50,000 for a restricted endowed fund. Endowment descriptions are approved by the donor, the university department that is proposed to administer the fund, and the Board of Trustees.

The Endowment operates similar to a mutual fund. Each named fund owns a number of shares in the University Endowment Fund based on the value of gifts to that fund. Representing a uniform portion of the fund, the number of shares owned is used to calculate the distribution to each named fund.

## Determining the Value of a Share

The value of a share is determined by dividing the total current market value of the assets in the University Endowment Fund by the number of shares outstanding. Example: If the Fund was worth \$3,600,000,000 on a given date and there were 600,000 total shares, each share would be worth \$6,000. **Note:** This value is determined monthly by the Office of the Controller and will increase or decrease in direct relation to investment performance and expenses. New shares are issued monthly when gifts to new or existing endowed funds are received from University Foundation. Example: If a donor gave \$60,000 to start a new named fund, the Fund would own ten shares ( $\$60,000/\$6,000$ ), and the total number of shares would increase to 600,010.

## Named Fund Administration

The endowment description, authorized by the University Board of Trustees when the fund is established, states each named fund's purpose. Each fund is administered by the college or university department designated by the donor(s) and the Board of Trustees. It is the college dean's or the department chair's responsibility to make expenditures from the fund under directions set forth in the endowment description.

If distributions are not used in a given fiscal year, the college or department may carry the balance forward into the next fiscal year for purposes specified in the endowment description; or the unused distribution may be reinvested to principal, thereby securing additional shares. To obtain additional shares, some endowment descriptions automatically require unused distribution or a portion of annual distribution to be returned to principal.

## Distribution

It is the university's policy to make an annual distribution, at the beginning of each fiscal year (in advance), to each fund. Annual distribution equals 4.25% of the seven year average of the pool's monthly market value per share. Example: If over the last seven years, the University Endowment averaged a monthly market value per share of \$5,883, the spendable distribution for the upcoming year would equal \$250 per share ( $\$5,883 \times 4.25\%$ ). A fund with ten shares would thus receive \$2,500 ( $\$250 \times 10$  shares) in distribution.

## Built-In Growth

If annual Endowment earnings exceed annual distribution, the excess is retained in the Endowment pool. This increases the Fund's market value, increasing the base that the distribution is based upon which, in turn, enhances future distributions for each individual Endowment account and helps compensate for inflation. Therefore, an individual Endowment fund's principal and number of shares do not increase, but the market value will increase with excess returns. While there is no guarantee this method will keep the Fund ahead of inflation, the strategy is intended to help preserve the purchasing power of the Endowment and, thereby, ensures that the purposes for which any named fund was established are carried out indefinitely.
